

RIPACK GUN EXTENSION POLES
PACK EVERYTHING UNDER FULL SAFETY

Ripack offers a range of extension poles that are specially designed for shrink-wrapping large areas. Each extension pole and combination of extension poles adjust to your needs, the type of products you are protecting and your work environment.

These extension poles are attached, without the use of tools, by a simple socket to our Ripack 3000 shrink gun. With the extension poles, you can work faster and more comfortably on large areas whilst not having to work in tiring positions.

It is quick and easy to attach, by means of a simple socket, one or more extension poles to the RIPACK® 3000.

A folding arm rest is available for the RIPACK® 3000 version. It makes using the gun more comfortable by reducing the counterweight effect of a long extension pole.
